

High-quality, child-centered autism services for children ages 2-10

Inspiring children to say "iCAN" grow, learn, play, connect, and wonder.

Our Services

Center-Based ABA Therapy

Our clinics are designed to provide your child with a fun, engaging, and hands-on learning environment. Our highly trained technicians and BCBA's work directly with your child on important skills such as communication, social interaction, daily living routines, and school readiness.

Speech Therapy

Inner Circle's speech-language pathologists (SLPs) evaluate and assess your child's speech and language needs to create an individualized treatment plan tailored to the child's interests and abilities. Treatment addresses issues including speech, language, communication, and swallowing disorders.

School Readiness

The Inner Circle Autism Network school-readiness program works with children with autism and their families to empower children to have the skills they need to fully participate in a traditional school environment.

Family Support

Involvement from parents and caregivers in ABA therapy is an essential part of helping children with autism thrive. From observation rooms that allow parents to see treatment plans in action to guidance and support to ensure progress outside of sessions, our team is here to support the entire family.

What is Applied Behavior Analysis?

Applied Behavior Analysis (ABA) is a research-based scientific method of therapy that uses basic behavioral practices (positive reinforcement, prompting, repetition) to teach the development of essential skills.

ABA therapy is also proven effective in decreasing challenging behaviors such as tantrums, bed-wetting, feeding problems, aggression, self-injury, and other behavioral concerns.

Effective ABA therapy is not a "one size fits all" approach. A Board Certified Behavior Analyst (BCBA) will develop your child's individualized treatment plan and customize the intervention to your child's skills, needs, interests, and preferences.

- Little Rock
- Fayetteville (coming soon)

OKLAHOMA

- Edmond
- Oklahoma City
- Moore
- Tulsa (coming soon)

Diagnostic Requirements

An official medical diagnosis of autism made by a physician or psychologist that includes scored assessments that support a diagnosis of autism is required. In some cases, additional primary care documentation is also required.

Getting Started

Contact our Intake Specialists by calling us at 479-318-2300 or by completing the intake form with the QR code below.

Schedule a free consultation today!

We accept most private insurance and Medicaid. Scan the QR code for a full list of insurance providers accepted >>

If your insurance is not listed, we will work with you to find options for your services.
